

Company Mission

High Sec Labs provides innovative solutions for customers requiring highest security information systems.

About the Company

High Sec Labs (HSL) is a privately held Israeli company established in 2008 after few years of project based activities to provide standard and customized products for high security applications. HSL is an end-to-end solution provider for tactical and non-tactical high security information systems environments specializing in network separation, TEMPEST, thin-clients, cryptography, video processing and network infrastructure. HSL develops and manufacture products for the most demanding applications including critical network separation on board nuclear submarines and airborne command control platforms.

HSL team is formed from industry experts in many areas with very wide selection of in-house capabilities and expertise. The company is active in the development of leading edge defence technologies with many patent applications and agencies approvals.

HSL is capable of participating in all projects cycles from definitions, planning to development, production, testing, integration training and support.

Products / Projects

- ❏ **TTCM – Triple Thin-Client Module** • Small form-factor TEMPEST system combining 3 isolated Thin-clients, KVM and power supply. Designed for submarine and battle-ships workstations.
- ❏ **TSW48 - 48 Giga Ports TEMPEST fibre switch** • Tactical modular TEMPEST switch designed for submarine and battle-ships primary networks.
- ❏ **K400 Secured KVM Combiner** • Innovative KVM solution for physical network separation providing Windows based combined user interface.
- ❏ **K420 Secured KVM with integrated Thin-clients** • Secured KVM Combiner having two integrated thin-clients to and two external ports.
- ❏ **SS180 - Ship Server** • Powerful small form-factor ship-borne server designed for highest performance and availability.
- ❏ **BCS - Blade Client System** • Rack mounted combination of up to 18 client computers / thin-clients and KVM. Designed to provide network separation for user requiring larger number of networks / sources.
- ❏ **Satellite based personal / vehicle tracker** • Miniature encrypted satellite communication device for soldier and vehicle tracking with worldwide coverage.
